

GXO LOADOUT

SIMPLE DEMO & TALKING POINTS GUIDE (NON-TECHNICAL)

1. The 30-Second Dock Pitch (How to Start Your Demo)

Start your presentation with this straightforward explanation of what GXO Loadout does for dock teams.

Script to Read Out Loud:

"Welcome team. Today I am showing you GXO Loadout—our new mobile app built to make load inspections fast, easy, and 100% paperless. Instead of writing long order numbers on clipboards, you just snap a photo with your device camera. The app reads the paper, counts bags on pallets with a smart camera assistant, and catches common dock mistakes before the trailer door shuts. It even works if your Wi-Fi drops out on the dock."

2. The "Digital Twin" Concept Made Simple

Explain the Digital Twin concept using a simple warehouse mirror analogy:

"Think of GXO Loadout as a live digital mirror of our physical dock. Whatever is physically happening to the pallets and bags in front of you is mirrored instantly on your screen. But more than just keeping score, the app acts like a helpful co-pilot: it knows our warehouse rules and alerts you on the spot if something looks wrong."

3. Smart Dock Rules Built Into the App

Here are the real-world dock rules the app enforces automatically:

- **The 1-Partial Rule for Returns:** On return loads, a single product lot can only have 1 partial pallet. If an operator accidentally scans a 2nd partial pallet for the same lot, the app pops up an alert right away: "Combine these two partial pallets into one full pallet." This keeps our dock tidy and prevents shipping half-empty pallets back.
- **The 60-Bag Full Pallet Guard:** A full bag pallet is always exactly 60 bags. If an operator enters fewer than 60 bags on a full pallet label, the app flags it and automatically changes the label to a Partial Pallet.
- **The Partial Pallet Limit Guard:** Partial pallets must contain fewer than 60 bags. If an operator enters 60 or more bags, the app prompts them to mark it as a Full Pallet.
- **Automatic Bag & Box Math:** Inspectors never need to do manual mental math. The app automatically calculates Seedpaks, Cases, and Bag totals as you scan.
- **5-Second Shift Handoff:** If your shift ends mid-load, you can hand off the load to the incoming inspector in 5 seconds. The app keeps track of who scanned which specific pallets so nobody gets blamed for someone else's work.

4. Step-by-Step Presentation Script

Step 1: Opening the App & Choosing English or Spanish

Show the top bar. Tap the EN / ES button to show how the whole app instantly switches language. Mention: "Everyone on our dock can use the app in whichever language they prefer."

Step 2: Starting a Load with the Smart Camera

Tap "+ New Load". Take a quick photo of the Picklist and Bill of Lading (BOL). Point out how Order #, Load #, and product names fill in on the screen automatically. Say: "No more typing long 10-digit numbers by hand."

Step 3: Pallet Photo & Smart Bag Counter

Open a pallet. Take photos of the pallet sides. Show the Smart Bag Counter box on screen that suggests the exact bag count. Point out how fast it is to check off pallet sides.

Step 4: Demonstrating a Dock Mistake Catch

Show what happens when scanning a 2nd partial pallet on a return load. Point to the bright warning banner that tells the operator to combine the pallets. Say: "The app catches errors live while you stand in front of the pallet."

Step 5: Handing Off to Next Shift

Tap "Hand off to another inspector". Pick a team member's name. Show the updated handoff list. Say: "Your work is saved safely, and the next inspector takes over right where you stopped."

Step 6: Finishing & Printing the PDF Summary

Tap "Complete Inspection". Show the final summary matching expected bags versus actual scanned bags. Tap "Download PDF" to open the clean, printable report for shipping manifests.

Step 7: Manager Console & Easy Search

Go to the Manager Admin screen. Show how managers can search past loads by Lot Number, Order Number, or Inspector Name in 2 seconds.

5. Simple Answers to Team Questions

- **What if Wi-Fi goes down out on the dock?:** The app keeps working 100% offline. All photos and counts save on your device immediately and sync up to the cloud as soon as connection returns.
- **Do I have to type long order numbers?:** No! The smart camera reads paper picklists and BOLs for you.
- **Can we switch between English and Spanish?:** Yes! Just tap EN or ES at the top of the screen anytime.
- **How do managers look up an old load from last week?:** Managers can search the Archive tab by Lot Number or Order Number and pull up the full inspection and PDF report instantly.
